Subject: Research sample for collaboration

To whom it may concern,

I am very pleased to recommend Alen Sevsek for product strategy and commercial leadership roles in the life sciences and technology sectors. This recommendation is based on my first-hand interactions with Alen while he pursued his PhD in bioorganic and medicinal chemistry at Utrecht University.

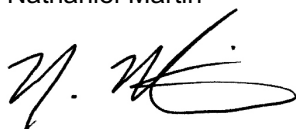

Alen's drive and dedication, coupled with his ability to independently design and conduct technically sophisticated experiments, shone through during his PhD research. In addition, Alen's ability to recognize patterns, translate complexity, and synthesize across disciplines were, and continue to be, key contributors to his success both inside and outside the lab.

Alen also has strong mentoring skills, having successfully supervised four BSc and MSc research projects through to thesis defence during his PhD. Furthermore, his excellent communication and coordination abilities were recognized when he was named Teaching Assistant of the Year in the College of Pharmaceutical Sciences honours programme within the Department of Pharmacy at Utrecht University. Alen's presentation skills were further developed and demonstrated during his PhD through his participation in a number of national and international conferences.

Based on these attributes and experiences, it is with the highest confidence that I recommend Alen for senior product strategy and commercial leadership roles in the life sciences and technology fields.

Sincerely,

Nathaniel Martin
